

## SaaS-BASED SECURITY WORKFORCE MANAGEMENT PLATFORM TAILOR-MADE FOR THE HEALTHCARE INDUSTRY

### WHAT DOES TRACKTIK DO

TrackTik's SaaS-based workforce management software helps collect data from smart devices and send that data wirelessly to a single dashboard that healthcare security teams can use to detect, monitor, and respond to potential security incidents. However, healthcare facilities pose a number of unique security challenges. One of the challenges security teams face working in healthcare facilities is that mobile phones are not always permitted as there is a concern that they may interfere with critical care equipment.

For these scenarios, the TrackTik Kiosk App can be installed on an internet-enabled tablet or laptop and deployed in minutes. Security teams can use this single app to document incidents and other critical information reported by security officers via radio communication, facilitate the data-gathering process and enable the data analytics insights that TrackTik offers.

Healthcare facilities rely on their security personnel to ensure the safety of staff, patients, and visitors. Regardless of how you choose to deploy TrackTik in your healthcare setting, TrackTik simplifies the process of collecting data, automating day-to-day, hour-to-hour reporting, and monitoring to produce valuable analytics to refine your healthcare security strategy.

### THE ADVANTAGES OF USING THE TRACKTIK SOLUTION

#### VISIBILITY & OPTICS

Detailed reporting and monitoring help healthcare security teams get visibility on their operations and enable other departments to understand what the team's day-to-day activities look like.

#### DATA-DRIVEN INSIGHTS

Easy access to real-time data helps your healthcare security teams identify incidents, find solutions, and solve problems without missing a beat.

#### JUSTIFICATION FOR INVESTMENT

The data produced by TrackTik can identify key places for investment. Bring this actionable insight into your planning and meetings with healthcare management.

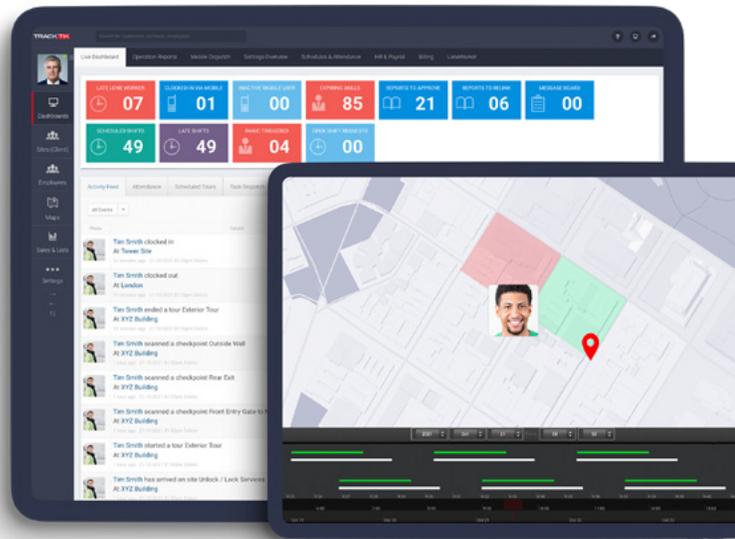

#### RISK MITIGATION

Identify blind spots with real-time information to help build out a more detailed security strategy for your healthcare facility. Uncover insights and spot trends to prevent incidents before they happen.

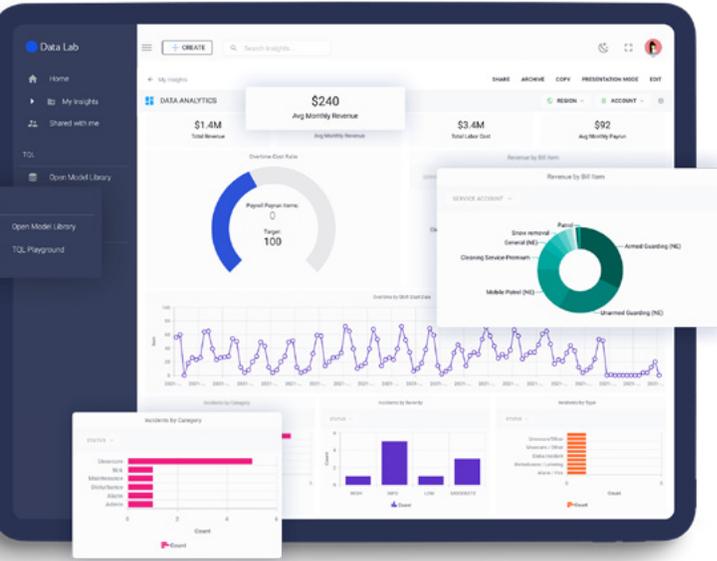

# TRACK LOCATIONS

With TrackTik's Live Dashboard, you can track the exact location of your security teams as they move throughout the healthcare facility, responding to incidents using GPS tracking. View the live location of security officers on a dynamic map and connect with them instantly via a Message Board.

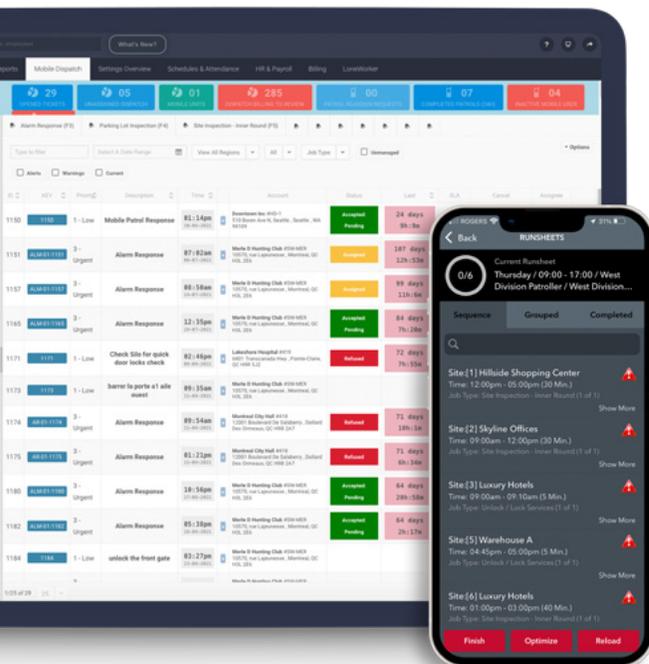

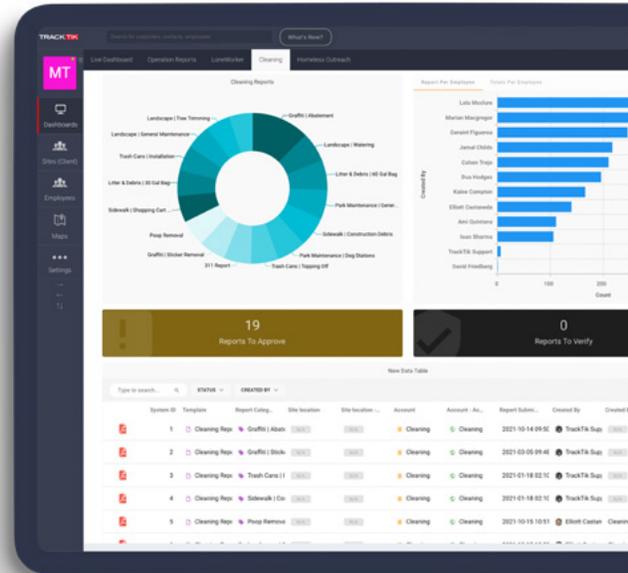

# UNCOVER INSIGHTS

Keep your operations running smoothly as you uncover insights that will help you make better-informed decisions by leveraging operational data. With tools to help you explore, visualize, and interpret data from the healthcare facility, you can monitor key performance indicators (KPIs) and deliver the numerical data you need to make swift data-driven decisions on what to do next.

# GATHER ANALYTICS

The analytics gathered from TrackTik can give you invaluable insights into your entire healthcare security teams' operations. TrackTik gives you access to incident analytics, real-time data, and incident reports filled out by your security officers are filtered into charts for easy viewing.

# DELIVER VALUE

TrackTik allows you to assign the right teams to the tasks that need completing in the most efficient way possible, delivering maximum value. Optimize your healthcare security teams with TrackTik's mobile dispatch, which allows you to define site-specific instructions for members of your teams.
